Subject: Niagara County EPA Sites-Dan Telvock

Hi Dan:

I will have to do some calculations to come up with an estimate for remaining material at NFB. As of today, 4,576 tons of material has been removed and shipped from NFB Site.

As far as Holy Trinity Cemetery, we have to work on that info in order to finalize the HTC action memo (the amount of material to remove, the time it will take, the cost of disposal as well as the overall estimated cost of the project). I won't have those estimates anytime soon since we are focusing on the demobilization right now.

I will provide that information when we have it.

Subject: couple questions

Eric

In your estimate, how much radioactive material is left to remove at the Niagara Falls Blvd site?
In tons, if possible?

In addition, how much did you anticipate having to remove at Holy Trinity and what was estimated cost?

Thanks

Dan Telvock
